

Stripe Payment Setup

Subject: Stripe payment setup — access request

Hi [Client name],

We are ready to connect payments to the site. Stripe will handle all card processing securely, and payouts will go directly to your bank account.

Please note: the Stripe account needs to be created and owned by you, not by us. That keeps the funds, the bank details and the tax records in your name from day one. Stripe does not allow an account to be transferred to a different owner later — it has to be recreated from scratch, which would mean losing all customer and billing history. It is worth setting this up correctly at the start.

Here is what we need from you. There are three short steps.

Step 1 · Create the Stripe account

Go to <https://dashboard.stripe.com/register> and sign up using your business email address.

You will be asked for:

- Business name and address
- Business type (corporation or sole proprietorship)
- Business number, or GST/HST number
- A bank account for receiving payouts
- A piece of photo ID for identity verification

Stripe then verifies the business, which usually takes **1 to 3 business days**. It is worth starting this early so it is not holding anything up later.

Step 2 · Add us to your team

Once the account exists, please invite us as a team member:

- 1 Click the **gear icon** in the top right of the Stripe dashboard
- 2 Open **Team and security**
- 3 Click **New member**
- 4 Enter this email address: **[your email address]**
- 5 Choose the role **Developer**
- 6 Click **Send invite**

The **Developer** role only allows technical setup. It does **not** allow moving money, changing your bank details, or issuing refunds. Those stay entirely with you as the account owner, and you can remove our access at any time from the same screen.

Step 3 · Let us know

Send us a quick message once the invite has been sent and the business verification has come through. We will take care of the rest of the setup and let you know as soon as it is ready for you to test.

One question before we finish: should prices be charged in **CAD** or **USD**? Since the business is Canadian, CAD is usually the better choice — it avoids currency conversion fees on every payout. Just let us know which you prefer.

If anything during signup is unclear, send us a screenshot of what you are seeing and we will walk you through it.

Best regards,
[Your name]
